OBJECTIVE

Sr. Software Engineer with 6+ years of experience building production web applications with Node.js, Angular, React and PostgreSQL, from real-time bus tracking and government services to healthcare and fintech. I work across the whole stack, including APIs, databases, dashboards and deployment. Today I build TRCM Labs (VIZN), a wealth-management platform, and LMP, its Lead Management Platform, while leading code reviews, coding standards and releases for the team. I keep learning new tools and use AI-assisted development every day.

EDUCATION

Bachelor of Computer Science, Swami Vivekanand Group of Institution

2016 - 2020

SKILLS

Leadership	Team leadership, Mentoring, Code review, Coding standards, Release management, Sprint planning
Frontend	Angular 2+, React, TypeScript, JavaScript, HTML/CSS, Responsive UI
Backend	Node.js, Express.js, REST APIs, Auth & sessions, Webhooks, Cron jobs
Databases	PostgreSQL, MongoDB, Sequelize ORM, Schema design, Migrations
Cloud & Integrations	AWS S3, DocuSign, Dropbox, EzTexting SMS, Strapi CMS, AI APIs
DevOps & Quality	GitHub Actions, CI/CD pipelines, E2E testing, Integration testing, Jira, AI-assisted development

EXPERIENCE

Sr. Software Engineer

Jun 2024 - Present

engineersmind

- Build and maintain TRCM Labs (VIZN), an enterprise wealth-management platform, and LMP, its Lead Management Platform.
- Develop Express.js and TypeScript services in a Yarn-workspaces monorepo (SSO, core app, file, platform and cron services).
- Designed a platform-wide activity-log system with parent-child event tracking for audit and compliance.
- Build React 18 front ends with typed hooks, protected routing and passwordless passkey sign-in.
- Integrate DocuSign eSignature, Dropbox and AWS S3 into document-generation pipelines.
- Connected TRCM Labs (VIZN) to LMP for CRM sync, workflow campaigns, SMS, email inbox and campaign analytics.
- Led a security review and pen-test scoping, and built the engineering risk register.

Associate Software Engineer L-3

Jan 2022 - May 2024

Unthinkable Solutions LLP (Daffodil)

Gurugram, Haryana

- Designed, developed and maintained web applications on the MEAN stack for large consumer and public-sector products.
- Worked across the full software development life cycle: planning, coding, testing and deployment.
- Led development of the interactive dashboard for the Chalo bus-tracking app, and helped build its real-time chat.
- Built Angular interfaces and Node.js / Express APIs, and wrote boilerplate for features like dynamic reactive forms.
- Reviewed code and mentored junior developers.

- Helped design, code and test software applications, working alongside senior engineers.
- Led front-end and back-end work on the Stella Prevent (Curio) healthcare platform.
- Kept up with new technologies and industry trends in web development.

PROJECTS

TRCM Labs (VIZN): An enterprise wealth-management platform for funds, investments, commissions and eSignature. It runs on four Express services and 17 shared packages over 110+ PostgreSQL tables, with a React front end. trcmlabs.com

- **Technologies Used :** TypeScript, Express, PostgreSQL, React, DocuSign
- **Responsibilities :** Built audit logging, passkey sign-in and DocuSign document flows.

LMP (Lead Management Platform): A lead and campaign platform connected to TRCM Labs (VIZN). It has a CRM for leads and contact groups, visual workflow campaigns (trigger, message, wait and condition steps), drip enrollments, SMS, a shared email inbox, calendar booking and live campaign analytics.

- **Technologies Used :** Node.js, TypeScript, REST APIs, CRM, SMS
- **Responsibilities :** Connected TRCM Labs (VIZN) to LMP for CRM sync, workflow campaigns, SMS, email inbox and campaign analytics.

Chalo Bus: A free app for live-tracking buses. It shows when your bus will reach your stop and sells tickets for government buses in many cities. chalo.com

- **Technologies Used :** Angular 14, React, Node.js, Jenkins
- **Responsibilities :** Led the dashboard build and helped design the real-time chat.

Umang: A single mobile app that gives citizens access to major central and state government services. web.umang.gov.in

- **Technologies Used :** Angular, Express, MongoDB, AWS, React Native
- **Responsibilities :** Built dynamic Angular interfaces, Node.js / Express APIs and reusable boilerplate for dynamic reactive forms.

Stella Prevent (Curio): A healthcare platform that helps women fight postpartum depression, with real-time consultations and caregiver support. curio.io

- **Technologies Used :** Angular, Node.js, MongoDB, S3, FFmpeg
- **Responsibilities :** Led front-end and back-end work and designed the MongoDB schemas.
